

TOMMANIKIN™

THE BEST MANIKIN FOR THE WORST SITUATIONS

Constructed of silicone and welded steel, **TOMManikin™** weighs more than 160 pounds and his extremities can withstand up to 6,000 pounds of pressure, making him the ideal choice for confined space, building collapse, care under fire, and entrapment training scenarios. Interventions include tourniquets, airway management (basic to advanced), needle decompression, chest tube, IV/IO, and wound packing on *all manikins*.

AVAILABLE IN THREE CONFIGURATION PACKAGES:

- **TOMMANIKIN™ Basic**

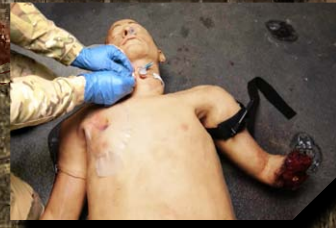

Includes: Partial amputation to left arm, full amputation to right leg

- **TOMMANIKIN™ Blast**

Includes: Skull with blast/burned head skin, abdominal evisceration, shrapnel wound right arm, full amputation left leg

- **TOMMANIKIN™ GSW**

Includes: Sucking chest wound (with anterior entry / posterior exit), packable GSW to groin (anterior entry/posterior exit), packable GSW right leg (through & through)
